- Coins: ['RENDER']
- Return: 50.2184%

Dilrabo 6:26 PM
Create a new strategy called RSI_Reversal that buys when RSI < 30 and
sells when RSI > 70 with 3% profit target

what are some other strategies we can create?

Kadirov Quant Lab 1:15 PM
🔄 Working on it...

Here are some strategy ideas we could create, organized by approach: 1:15 PM

**📈 Trend-Following**
1. **MA_Crossover** - Buy when fast MA crosses above slow MA, sell on reverse cross
2. **Breakout_Hunter** - Buy when price breaks above N-day high with volume confirmation
3. **MACD_Momentum** - Trade MACD signal line crossovers

**📉 Mean-Reversion**
4. **RSI_Oversold** - Buy when RSI < 30, sell when RSI > 70
5. **Bollinger_Bounce** - Buy at lower band, sell at upper band
6. **Z_Score_Reversion** - Buy when price is N standard deviations below mean

**🌊 Volatility-Based**
7. **VolatilityHarvesting** - Capture 2% moves off local dips/peaks
8. **ATR_Breakout** - Use Average True Range to size breakout entries
9. **Volatility_Squeeze** - Trade after periods of low volatility (Bollinger squeeze)

**📊 Volume-Based**
10. **Volume_Spike_Buyer** - Buy on unusual volume surges with price confirmation
11. **OBV_Divergence** - Trade On-Balance Volume divergences vs price

**⏰ Time-Based**
12. **DCA_Smart** - Dollar-cost average with dip acceleration (buy more on bigger drops)
13. **Weekend_Dip** - Exploit weekend liquidity patterns

**🔀 Hybrid/Multi-Signal**
14. **Trend_Pullback** - Buy pullbacks only in confirmed uptrends (MA + RSI)
15. **Triple_Confirmation** - Require 3 indicators to align before entry

**🎯 Profit-Taking Variants**
16. **Trailing_Stop_Trader** - Lock in gains with dynamic trailing stops
17. **Scaled_Exit** - Sell in tranches at multiple profit targets

Want me to create any of these? Just tell me which one (or describe your own variation) and I'll set it up.
For example: *"create RSI_Oversold strategy"* or *"create Bollinger_Bounce with 20-period bands"*.

Dilrabo 1:16 PM
let's implement MA_Crossover, where by default we have fast MA=1day and slow MA=3days and backtest
it for LINK for last 30 days
default MAs can be differnt, we might optimize it later
